

ASSIGNMENT 10 — Bootstrap

Instructions for Students

- Create a **separate HTML and CSS file** for each question.
 - You must use **Bootstrap 5 via CDN**.
 - **No JavaScript** except where Bootstrap requires it (e.g., Carousel).
 - Use **semantic HTML5 tags** (`header`, `main`, `section`, `footer`, etc.).
 - All pages must be **responsive** using Bootstrap's **Grid** or **Flex utilities**.
 - Apply **realistic text, headings, and visuals** to make the layout look like a real website.
 - Add short comments in your code to explain key Bootstrap classes.
-

1. Company Landing Page (Intro to Bootstrap)

Scenario:

You've been hired to make a startup's landing page using Bootstrap.

Requirements:

- Include Bootstrap via CDN and verify setup.
- Create a full-width **header** with the company name and a **navbar**.
- Add a **hero section** with a large heading, subtitle, and "Get Started" button.
- Use `.container`, `.row`, and `.col` for layout.
- The page must resize perfectly across screen sizes.

Goal: Demonstrate how Bootstrap's core grid and utilities make layout simple.

2. Personal Portfolio Basics (Bootstrap Utilities)

Scenario:

Design your personal profile homepage using Bootstrap's basic utilities.

Requirements:

- Use margin (`mt-4`, `mb-3`), padding (`p-5`), text (`text-center`, `fw-bold`), and background (`bg-light`, `text-dark`) classes.
- Include:
 - A header with your name and tagline.
 - A profile image (`.img-fluid`, `.rounded-circle`).
 - Two buttons: "Hire Me" and "Download CV".
 - A small contact form using `.form-control`.
- Use `.container` and `.text-center` for alignment.

Goal: Apply Bootstrap basics like spacing, text, background, buttons, and inputs in a real portfolio layout.

3. Product Catalog (Bootstrap Grid System)

Scenario:

Build a grid-based product listing for an online store.

Requirements:

- Use `.row` and `.col-md-3` to create a **4-column** product grid.
- Each product card includes an image, name, price, and "Add to Cart" button.
- On tablets, show 2 columns; on mobiles, 1 column.

- Add hover effects using `.shadow-sm` and transitions.

Goal: Use Bootstrap's grid and responsive classes to build an adaptive product layout.

4. Restaurant Menu Page (Bootstrap CSS Components)

Scenario:

Design a "Today's Menu" section for a restaurant website.

Requirements:

- Use a Bootstrap **table** to display menu items, categories, and prices.
- Add a **list group** for "Chef's Specials."
- Include one `.img-fluid` food image with caption.
- Use `.text-center` and `.lead` for typography.

Goal: Combine multiple Bootstrap CSS components in a cohesive layout.

5. Custom Themed Blog Homepage (Bootstrap Themes)

Scenario:

Create a blog homepage using Bootstrap and a custom theme color.

Requirements:

- Override theme variables (e.g., `--bs-primary`, `--bs-font-sans-serif`).
- Apply your theme to headings, buttons, and cards.
- Include a header, two blog post cards, and a footer.
- Use a Google Font for typography.

Goal: Learn to personalize Bootstrap's look while keeping its responsive structure.

6. Notifications Dashboard (Alerts & Wells)

Scenario:

Build a dashboard panel showing user notifications.

Requirements:

- Create 3 alerts: success, info, and danger (for new messages, tips, and warnings).
- Add a dismissible alert using `.alert-dismissible`.
- Include a “summary well” (a bordered, padded `.bg-light` section).
- Use `.container` and `.card` to group alerts nicely.

Goal: Display contextual messages using alerts and styled wells.

7. Task Tracker with Badges

Scenario:

Design a task manager interface showing tasks with completion status.

Requirements:

- Display tasks in a `.list-group`.
- Each task includes a **badge** indicating priority (`High`, `Medium`, `Low`).
- Add a **badge counter** in the header showing total pending tasks.
- Include a “Completed” button with `.btn` and embedded badge.

Goal: Practice badges and contextual color usage for real data indicators.

8. Pricing Plans (Panels & Cards)

Scenario:

Create a “Choose Your Plan” pricing section for a SaaS product.

Requirements:

- Use 3 Bootstrap cards side-by-side (`col-md-4`).
- Each card contains plan name, price, and features list.
- Highlight the “Pro” plan using a different color (`bg-primary`, `text-white`).
- Add hover effects using `.shadow-lg` and CSS transitions.

Goal: Build a responsive, card-based layout similar to pricing sections on real websites.

9. Blog Pagination & Pager

Scenario:

Add pagination navigation to a blog posts page.

Requirements:

- Create a Bootstrap `.pagination` component with “Previous”, “1”, “2”, “Next”.
- Center it using `.justify-content-center`.
- Add a simple pager below with “Older Posts” and “Newer Posts” buttons (`.btn-outline-secondary`).
- Use `.container` for alignment and spacing.

Goal: Use pagination elements for content navigation in multi-page layouts.

10. Travel Agency Showcase (Carousel & Progress Bar)

Scenario:

Build a travel website homepage featuring a destination slideshow.

Requirements:

- Add a **Bootstrap Carousel** with 3 slides of different travel destinations, each with captions.
- Set custom time intervals using `data-bs-interval`.
- Below the carousel, add a **progress bar** showing booking completion (e.g., 70%).
- Style the bar using `.progress-bar-striped` and `.progress-bar-animated`.
- Include a footer with contact details.

Goal: Combine dynamic Bootstrap components to make an interactive landing page.
