

Assignment - 9

Instructions

- Each question should have separate HTML and JS files.
 - Include at least 5 elements/items where applicable.
 - Use semantic HTML5 structure.
 - Include comments explaining key jQuery logic.
 - Each question now has multiple scenarios to demonstrate flexibility in real-world applications.
-

Q1 – Welcome Page Greeting

A website greets visitors dynamically.

1. On page load → display a personalized greeting based on time of day (Morning/Afternoon/Evening).
 2. Button “Change Greeting” → changes text to a motivational quote.
 3. Toggle visibility of a welcome message using another button.
 4. Show an alert when greeting is clicked.
-

Q2 – Product Highlight

An e-commerce site highlights products for better UX.

1. Click on a product → highlight background.

2. Hover over a product → show additional product details.
 3. Clicking a “Favorite” icon → toggles a “selected” class.
 4. Apply different styles to products with discounts using attribute selector.
 5. Show an alert if a product is out of stock (using data attribute).
-

Q3 – Interactive FAQ

FAQ section with interactive Q&A.

1. Click on a question → toggle answer visibility.
 2. Hover → change question color.
 3. Double-click question → collapse all answers.
 4. Focus on answer input (if any) → highlight parent question.
 5. Blur from input → reset background color.
-

Q4 – Special Offer Banner

Promotional banners with dynamic effects.

1. “Hide” button → hide specific banners.
 2. “Show” button → show hidden banners.
 3. “Slide Up/Down” buttons → toggle banners.
 4. “Fade In/Fade Out” → show/hide banners gradually.
 5. Automatically rotate through banners every 5 seconds using `.fadeIn()/.fadeOut()`.
-

Q5 – Team Members Directory

Directory with hierarchical relationships.

1. Click a manager → highlight all direct reports.
 2. Hover on an employee → show contact info using `.next()`.
 3. Click on a department → change background of all members in that department using `.children()`.
 4. Select a random employee → highlight sibling employees.
 5. Collapse/expand team using `.parent()` and `.find()`.
-

Q6 – Event Subscription Panel

User subscription management.

1. Subscribe → enable notifications.
 2. Unsubscribe → disable notifications.
 3. Dynamically add new subscription topics → attach `.on()` click events.
 4. Remove specific subscription → detach `.off()` event.
 5. Show success message → dynamically inserted into DOM on action.
-

Q7 – Search Courses

Filtering courses in an online learning platform.

1. Search input filters courses in real-time using `.keyup()`.
2. Highlight matched text using `.css()`.

3. Toggle visibility of courses not matching search.
 4. Show count of matched courses dynamically.
 5. Clear search → reset list to show all courses.
-

Q8 – Dynamic Blog Posts

Admin panel for managing blog posts.

1. “Add New Post” → append a new post to the list.
 2. “Prepend Featured Post” → add a post at the top.
 3. “Remove Last Post” → delete last element.
 4. Add tags to posts → use `.before()/after()` for placement.
 5. Highlight posts with specific keywords dynamically.
-

Q9 – Multi-JQuery Widgets

Dashboard uses multiple jQuery versions.

1. Version 1 → handles carousel slider rotation.
 2. Version 2 → manages modal popups for notifications.
 3. Version 1 → highlights active widget.
 4. Version 2 → attaches tooltips on hover.
 5. Use `jQuery.noConflict()` → ensure both versions operate simultaneously.
-

Q10 – Registration Form Validation

User registration requires client-side validation.

1. Check Name field → not empty.
2. Check Email field → valid format and uniqueness.
3. Check Password → minimum 8 characters.
4. Show success message if all fields valid.
5. Highlight invalid fields dynamically with red border using `.css()`.
